

LETTER OF ANNOUNCEMENT
Release 1.5 of the EU Hub

26th April 2019

Dear all,

EMVO has the great pleasure to officially announce a new release, Release 1.5, of the EU Hub. We have previously indicated in communications on the EVI, and in Letters of Announcement, that some updates are planned for Release 1.5; and we can now announce that it is our current working estimate that Release 1.5 will be available in IQE by the end of May, and in PRD by the end of June.

The new release of the EU Hub will include several functionality changes for OBPs;

- Enhance the information that will be communicated via the Product Master Data Report
- Simplification of the serial number randomization test
- Enable bulk activity for sample packs
- Make it mandatory, where applicable, for an OBP to provide a 'National Code' when distributing a pack to a country where this is a requirement. This is relevant to; Portugal, Austria, Germany, and Spain.
- Release 1.5 will provide more distinctive descriptions of the 'O1 System Not Available' messages

Please let us assure you that we will be providing updates about Release 1.5 in the lead up to its roll-out. We will communicate on the EVI on the current status of the roll out and will, of course, provide a more concrete delivery date in good time.

We would already like to inform you that the OBP interface will not change with Release 1.5.
